

We see IT differently

Evaluating the effectiveness of your Analytics

Data Assessment Services
that improve your profitability

Evaluating the effectiveness of your Analytics

Data analytics technologies mark the road to the future. Effective tools, and methodologies ensure that your organization takes full advantage of quality data, deriving from diverse sources. Assessing the outcome of the effort and working with information and data in a more efficient and effective manner is what helps you make informed business decisions and thrive in your industry.

Evaluating the effectiveness of Analytics is a serious business, this is why we choose to collaborate with Microsoft Azure, the powerful analytics platform which allows organizations to harness the business value of data, providing a range services that cover every need:

- ▶ streamline the data platform through a specific architectural plan,
- ▶ develop a data optimization strategy,
- ▶ adopt a roadmap to drive business insights through Azure Data Services.

To make that happen, a four-phased Analytics Assessment approach is followed:

- 1. Discovery**
Identify business goals, risks and the insights needed to drive success.
- 2. Data collection**
Get a clear picture of current data and analytics landscape and maturity.
- 3. Gap Planning**
Develop a modern data platform design with cost estimates.
- 4. Action**
Implement a strategic plan, skilling and adoption roadmap for the use cases.

Customers using Azure Synapse and Power BI today are transforming their business with purpose:

▶ **270%**
Return on investment

▶ **60%**
Increased customer satisfaction

▶ **27%**
Faster time to insights
